## Jurassic world the game dinosaur tier list

Explorers! After many hours of hard work and turbulent debates, we finally have a list of 1.9 levels for you. We are very excited to have this list published for you. But before we delve into it, we want to thank everyone who was involved in creating the list of levels, because it was a huge group effort. From GamePress: Bbel99, Castal, ChrissyChris27, CincyD99, DadJokes, Ethan, Heather, Jimbohi, Kelocriaptor, MypNN, Somerandompoke, Steph, The AquaDemon, Thedick, Bart, Dr. Reebeca, Pien97 and MBrian From Apex Predators: DGT902, King Dreadnaught, Legomin1314 and Practicat And of course a special cry to Matt from the JWA Field Guide for his help in his amazing Battle Simulator and to our amazing artist Orange Rex to create these wonderful infographic level lists you can find a little lower in the article! Once again, it's a real process to take tier list, especially with over 20 people working on it! However, we all agree that this list of levels is as accurate as possible. We are all sure that we have the right to every place. And trust us, there has been a lot of discussion about some dinosaurs! Looking at you Thoradolosaur, Tenorex and Dracoceratops! Our level list is based on equal levels and does not include any reinforcements. This is very important information, because in the end you will be at the point of the game where you will get your dinosaurs to level 30, and the bonuses will also be exhausted (even if it is in a few years). That's why our level list is so important: find the best creatures you can invest in for your endgame team. This also means that rarely is not taken into account when discussing the list of levels. Spawns change. Exclusive arenas don't become so exclusive. And now sanctuaries are even opening up a new world of possibilities to achieve DNA that was previously not possible to get beyond the described dinosaurs or incubators. Our level list is based on discussions and matchups. We conduct hundreds of friendly battles on our own, determining what works and what doesn't. We have a comprehensive combat simulator created by JWA Field Guide that helps us see how each creature performs compared to any other creature and run every 3 on 1 matchup 4000 times. But this is not a list of simulation layers. If that were the case, we would have it ready for you on the day of the fix. This is a list of levels that 20+ wonderfully talented and intelligent individuals have discussed a lot to get to the bottom of each creature, using all the information at your disposal (friendly battles, simulation results, our own arena experiences, etc.). As you'll soon see, there have been major changes at the top of the list of levels. Please note that these decisions have not been taken lightly. Our entire team has discussed each dinosaur at the top of the list of levels and we are sure that the place we gave them is considered important. Thoradolosaur and Dracoceratops, for example, were awarded their seats on the basis of Discussions, Friendly Battles, Simulators. A whole bunch. There have been some big changes, but we are sure that these changes are changes that we had to make. With that in mind, here are some of the hottest debates we've had to deal with! Tenorex and Thoradolosaur: These two chompers were greatly affected by the increase in immune sauropods and various immunities that were introduced. However, they are still solid powers who definitely deserve a place in the team. We had serious discussions about these two and where they were placed. Dracoceratops: This little vermin has always been a heated debate about the discussion on the list of levels and this time it was no different. The rise of some armored creatures and high-health pools makes Dracoceratops slightly less effective in its role than it used to be. Still, this little rat has the ability to take out a dinosaur before you can do anything about it. So it was definitely a heated debate to say the least. Almost the entire tyrant level had to be re-evaluated with this meta. I spoiler alert: there have been some major changes. However, we decided not to set a level between Tyrant and High Apex to fit old tyrants there. This is because we believe that the list of levels is based on suitability and that in each level you have different levels of suitability. As an example: We have Quetzorion in High Apex, but Grypolyth is also in High Apex. Both are very different creatures that may not have any problem with themselves. However, both are very useful in their role, and that's why they are in High Apex. We believe tyrant level is almost the best of the best in the game, and we wanted to keep this level exclusive without dividing it into High and Low Tyrant, nor by placing a new level between them. We will try to add explanations to each destination later to further explain our choices. We'll also release Counter Guides for some higher-ranking dinosaurs. Yay for the return of Counter Guides! We're going to include our battle simulator results to really determine the best counters! In the future, we'll republish another list of community levels, so keep your eyes peeled! For now, check out our official list of 1.9 levels! Back again, we've added infographics from the list of levels. We want to thank our wonderful artist Orange Rex once again for creating these amazing infographs! Check'em out! Consider supporting GamePress and the author of this article by joining GamePress Boost! Attack! By continuing to browse our website, you agree to our Cookie Policy. For more information, visit here. I agree that alphabetical Popular Recent Tier Atter Atter BTier CTier F Jurassic World alive is an adventure game released worldwide in 2018. This is a Jurassic park dinosaur game of the universe. Jurassic Park dinosaurs return to the world once again with new species. You must protect them from death and play your part their race. Take a tour of the area and capture your favorite dinosaurs from the Jurassic Park universe. Collect DNA and start working in the lab to increase their race. You have a drone camera to see their location. This will help you capture dinosaurs in order to obtain DNA. You can create a team of dinosaurs and start training them to fight other opposing dinosaurs. Jurassic World alive gives you the opportunity to play in player versus player mode. In this mode, you will fight the dinosaurs of the opponent of the player. And you will earn rewards for winning the battle. Jurassic World alive is available for free download on Google Play and the Apple App Store. You can download it at any time to play with your favorite dinosaurs from the Jurassic Park universe. Jurassic World alive characters are divided into six groups. The most distinguished characters in Group S are Mortem rex and Hadros Lux. These are really the best dinosaurs in the game. The main characters in Group A are Utahrinex and Tuoramoloch. They are almost as good as S-levels. These dinosaurs are very deadly. The main characters in Group C are Rhino Woolly and Woolly Mammoth. They can be an average addition to your team. The main characters of Group D are Wuerhosaurus and Utahaptor. Some of the f-groups are Velociraptor and Triceratops GEN 2. They are at least bothered.
